**WORLD  
MENINGITIS  
DAY  
24 APRIL**

---

# Pedro Arthur suffered meningitis at 18 months

Did you know meningitis kills or disables hundreds of thousands of people worldwide each year? Approximately 1 in 10 will die and a further 1 in 5 will suffer a long term disability.

**Meningitis is a global issue that can affect anyone, anywhere and at any time. Yet the most serious forms can be prevented!**

Vaccines exist to help prevent certain causes of meningitis. They have helped to reduce the tragic impact of this disease in many countries. But more can be done. Get vaccinated, protect your loved ones, and support us in our work to help ensure that we all have access to vaccines to prevent meningitis.
